Material  
Brass.

- Execution A: with technopolymer contrast screen.
- Execution B: without contrast screen.

Window  
ESG-glass.

O-ring

FKM synthetic rubber (type VITON®, registered trade mark of DuPont Dow Elastomers).

Maximum continuous working temperature

350°F (180°C).

*Features and applications*

GN 743.8 oil level indicators can be used on pressurised tanks (oil-proof resistance data available on request). The natural glass window is resistant to scratches.

The seal between the aluminium body and the glass window is guaranteed by an O-ring in FKM (type VITON®, registered trade mark of DuPont Dow Elastomers).

The conical thread on the GN 743.7 oil level indicator, allows for a metallic seal to be made. The male thread R can be screwed by hand into the female thread Rp, until the point where the male thread R diameter is the same as the female Rp. Further tightening by means of a suitable tool (spanner) will seal the connection. Additionally a sealant (hemp or teflon band) can be used on the thread of the oil level indicator, which is roughened to prevent slippage of the sealant.
