#### Base

AISI 304 stainless steel, sandblasted matte finish.

#### Threaded stem and adjustable sleeve

AISI 303 stainless steel, sandblasted matte finish, supplied assembled.

Glued assembly screw in stainless steel.

#### No-slip disk

NBR synthetic rubber (PERBUNAN), vulcanised to the base, hardness from 85 to 90 Shore A, black colour.

#### Features and applications

- The convex shape of the bolt head reduces the deposit of dirt and simplifies the cleaning operations.
- The adjustable sleeve covers the threading of the stem and it reduces the deposit of dirt.
- The NBR rubber no-slip disk is firmly bonded to the base by means of a vulcanisation process and a glued metal screw, which makes the two parts integral and prevents any solid or liquid substances from infiltrating into the base.
- Stainless steel, thanks to its high resistance to corrosion, allow the applications of these levelling elements on machines and equipment in those sectors where laws or particular hygienic, climatic and environmental factors make it mandatory to use corrosion resistant materials.

#### Technical data

The load values reported in the table are the result of a series of tests where a vertical load is applied to the stem and distributed on the horizontal plane of the base. If the values are exceeded a deformation of the base can occur first on the metal sheet and eventually on the no slip-disk plastic material.
